

Display description of free seats display

Some users mentioned that it wasn't exactly clear if the seats display displays the free seats or the occupied seats. To solve this problem we added labels to every display.

Before

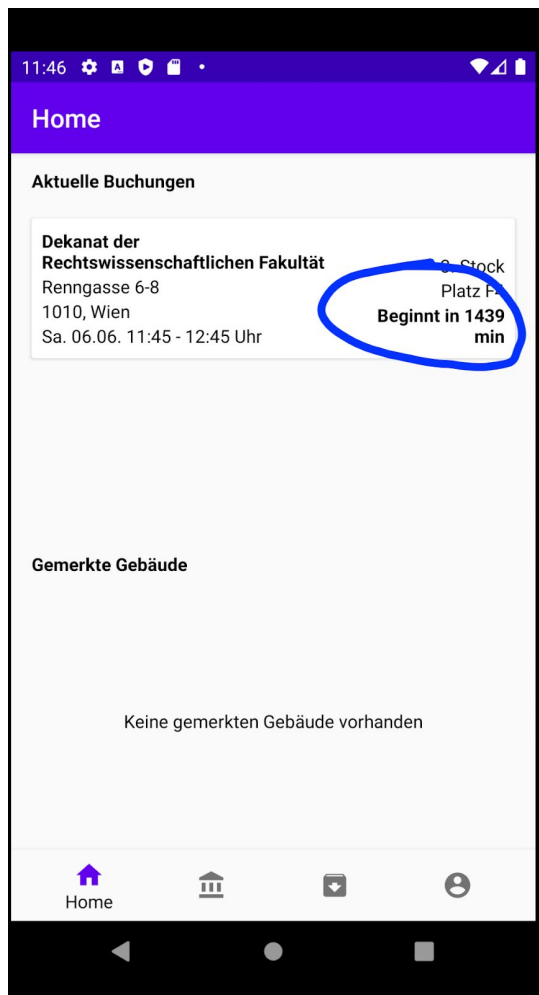

After

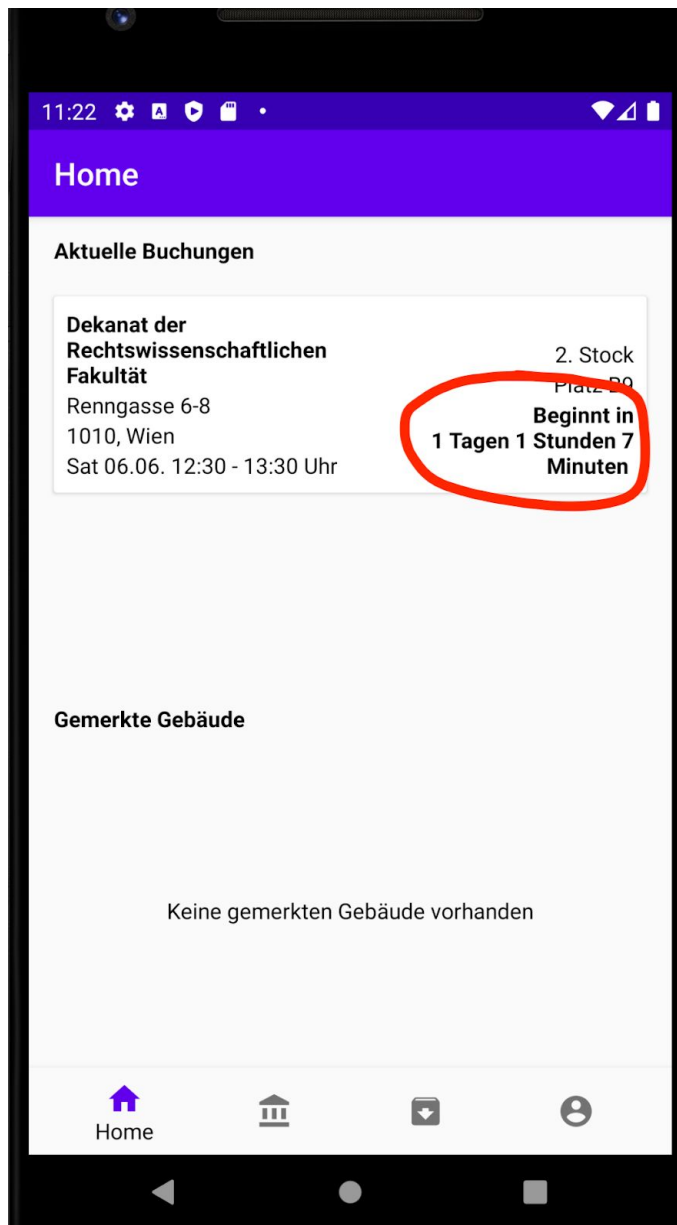

Reformat the duration until a booking begins or ends

This duration was only displayed in minutes and for duration of more than a couple hours not very intuitive. We adapted it to display days and hours as well if appropriate.

Before

After

Reposition misaligned inputs and introduce back button in app bar

Some users missed the back button in the app bar so we added it to every activity except the main activity. We also aligned the time input which was slightly higher than the other inputs.

Rename search input label for searching buildings

The label "Filter" was not very clear to users so we renamed it to "Fakultät oder Adresse suchen".

Before

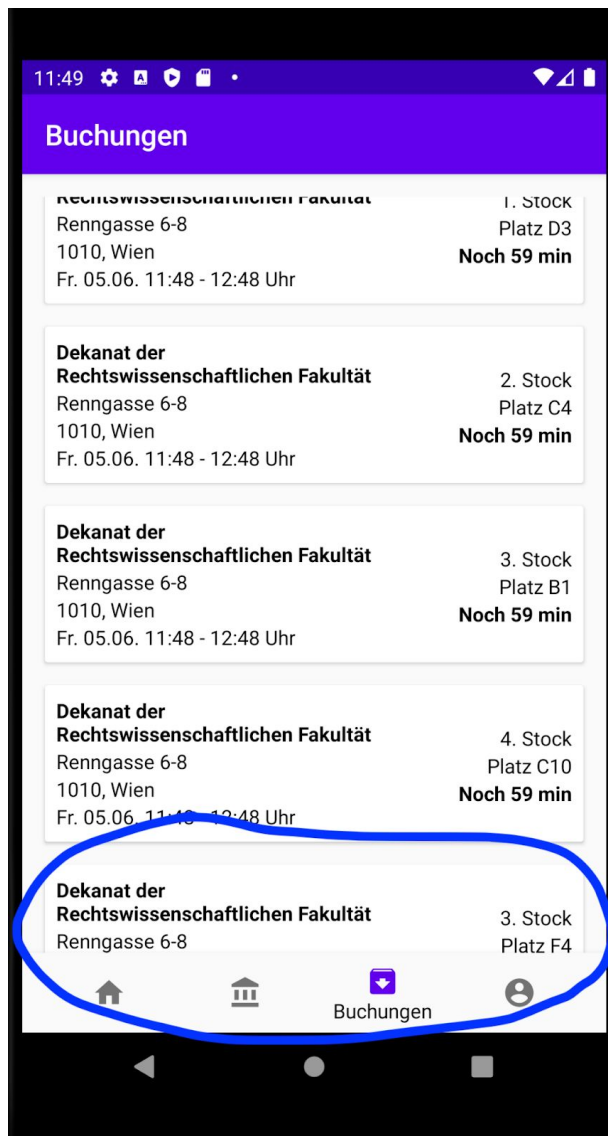

After

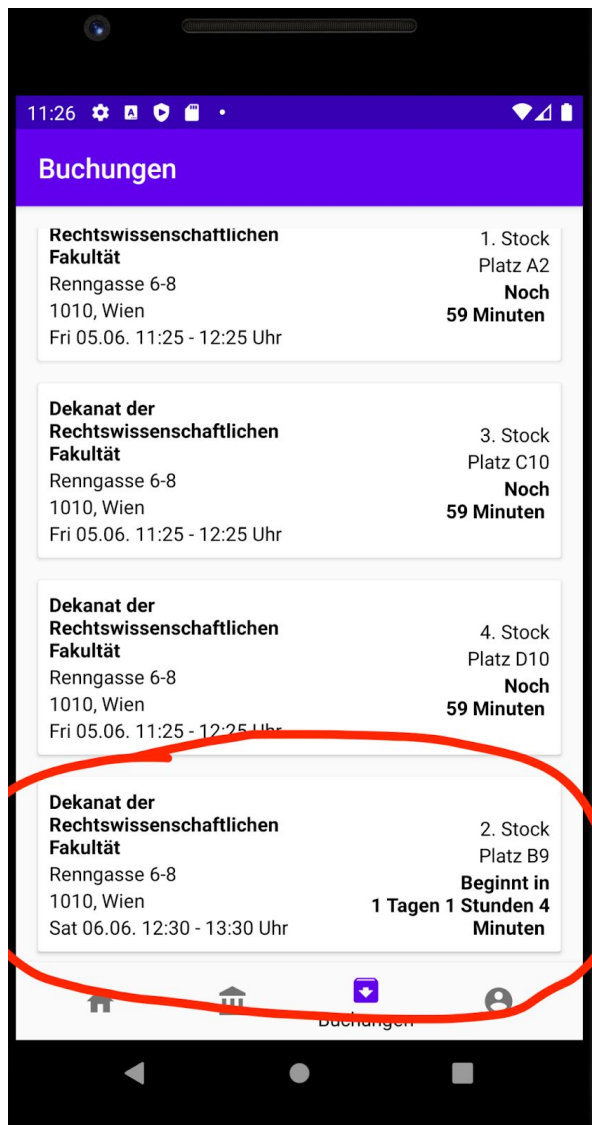

Fix bookings list

The last booking in the booking list was overlaid by the bottom navigation so we fixed that.

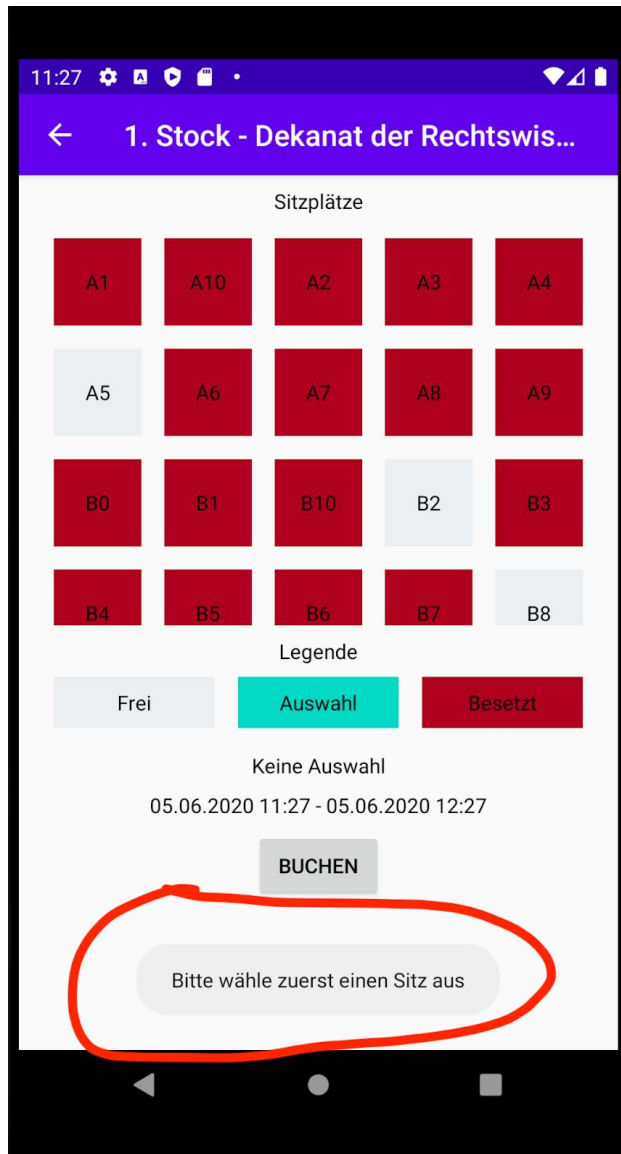

Before

After

Give a hint if the user tries to book without selecting a seat

Add label to “Mark building” button

Some users did not immediately understand what this button was for so we put a label beside it explaining what it does.
